

**Recommended Tools:** 

- 1 x 14mm Socket, 6" Extension and Ratchet
- Torque Wrench
- 1 x 8mm Allen Key
- 1. Remove the strut brace mounting brackets from the brace bar and place the two 14mm nuts, the two 8mm allen bolts and brace bar to one side.
- 2. Position the vehicle on a LEVEL surface and apply the HANDBRAKE.
- 3. Open the bonnet and support with the bonnet stay.
- 4. Locate, inside the engine bay on the offside and nearside inner wing, the four 14mm top mounting plate to body nuts (two per side).
- 5. Working on one side of the vehicle at a time, remove the two 14mm top suspension plate to body mounting nuts and place to one side (nuts will be reused).
- 6. Place the strut brace-mounting bracket onto the top suspension mounting studs with the brace bar mounts, to the rear of the engine.
- 7. Re-fit the two 14mm top suspension-mounting plates to body nuts and tighten to 29-36Nm (22-26lb-ft).
- 8. Repeat stages 5 through to 7 on the OTHER side on the vehicle.
- 9. Place one end of the brace bar into the strut mounting bracket and insert the 8mm allen bolt and 14mm nut, tighten finger tight.

## 10. Repeat stage 9 on other side of car.

- 11. Tighten the two 8mm allen bolts and 14mm nuts.
- 12. Well done, job finished! Have a cup of tea, stand back and admire your handy work.
